

Graphic Era
Deemed to be University

Program Scheme

Master of Computer Applications Degree Program

Program Code: OMC

Centre for Distance and Online Education

University's Vision, Mission, and Core Values

Vision: We visualize Graphic Era (Deemed to be University) as an internationally recognized, equity-driven, ethically engaged, diverse community whose members work collaboratively for positive transformation in the world, through leadership in teaching, research, and social action.

Mission: The mission of the university is to promote learning in true spirit and offer knowledge and skills in order to succeed as professionals. The university aims to distinguish itself as a diverse, socially responsible learning community with high-quality scholarship and academic rigor

Core Values:

- Continuous learning and improvement
- Simplicity
- Integrity and trust
- Ethics

Program Scheme: Master of Computer Applications

1. **Title of the Degree:** Master of Computer Applications (MCA)
2. **Mode of Study:** Fully Online
3. **Program Curriculum will be Effective from:** Academic Year 2023-2024
4. **Rationale for the Program:**

Computers, computer networks, and mobile communication have ushered in the digital revolution in the recent past. The fast-growing information and communication technology (ICT) is critical to strategic planning in most business houses, government organizations, and educational institutes all over the world. Organizations that strive to leverage the latest ICT tools require expert professionals who can apply the principles of computer science and information technology to address the issues effectively. To meet the shortage of qualified professionals in the IT industry, Graphic Era Deemed to be University has designed this Master of Computer Applications (MCA) degree program. The broad objective of this postgraduate program is to prepare graduates for productive careers in the software industry and academia. To accomplish these objectives, the university provides an outstanding environment for teaching and research in the core and emerging areas of this discipline.

The program lays immense emphasis on giving the students a thorough and sound background in theoretical and application-oriented courses relevant to the latest ICT paradigm. The program also focuses on the application of software technology to solve mathematical, computing, communications, networking, and commercial problems.

Professionals with an MCA degree are sought after in numerous corporate sectors, such as IT, Medical Sciences, and Engineering. These sectors need personnel having advanced knowledge of the application of computers to solve real-life problems. Several technology conglomerates in India have job openings for such candidates. With the right amount of experience and skillset, MCA candidates can find several challenging and rewarding career opportunities.

5. Program Educational Objectives (PEOs)

The educational objectives of the MCA program are to:

- PEO 1.** Empower students with employability towards building successful careers based on a sound understanding of theoretical and applied aspects and methodology to solve multidisciplinary real-life problems.
- PEO 2.** Develop professional graduates ready to work with a sense of responsibility and ethics.
- PEO 3.** Instil competency to pursue higher studies and research in areas of computer applications and other professionally related fields.
- PEO 4.** Inculcate the ability to adapt to changing technology through continuous learning.

6. Programme Outcomes (POs)

Serial Number	Graduate Attribute Theme	The Complete PO Statement
		After the successful completion of the MCA program, the graduates will be able to:
PO-1.	Knowledge Application	Apply the knowledge of mathematics, management, and computer applications to the solution of complex real-world problems.
PO-2.	Problem Analysis	Identify, formulate, review, and analyze complex problems reaching substantiated conclusions using principles of mathematics, management sciences, and computer applications.
PO-3.	Design/Development of Solutions	Design solutions for complex real-world problems and design system components or processes that meet the specified needs with appropriate consideration for health and safety, and cultural, societal, and environmental considerations.
PO-4.	Investigations of Complex Computing Problems	Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO-5.	Modern Tool Usage	Create, select, and apply appropriate techniques, resources, and modern computer software and IT tools including prediction and modeling to complex software engineering activities with an understanding of the limitations.
PO-6.	Environment and Sustainability	Understand the impact of professional software engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO-7.	Ethics	Apply ethical principles and commit to professional ethics and responsibilities and norms of the development practice.
PO-8.	Individual and Teamwork	Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO-9.	Communication	Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO-10.	Project Management and Finance	Demonstrate knowledge and understanding of the software engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO-11.	Life-Long Learning	Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
PO-12.	Innovation and Entrepreneurship	Identify a timely opportunity and use innovation to pursue that opportunity to create value and wealth for the betterment of the individual and society at large.

7. Programme Specific Outcomes (PSOs)

At the end of the MCA program, the graduate will be able to:

- PSO 1.** Apply fundamental principles and methods of Computer Science to a wide range of applications.
- PSO 2.** Design, implement, and document solutions to significant computational problems.
- PSO 3.** Demonstrate an understanding of the basics of computer applications.
- PSO 4.** Engage in continued professional development in a career in computer applications.

10. Programme Regulations: The regulations guiding this programme are available in the Program Guide.

MCA 1st Semester – Full Stack Development

Program	Master of Computer Applications
Semester	1
Course Title	Full Stack Development
Course Code	OMC101
Course Credits	3
Course Type	Core

1. Course Summary

The aim of this course is to gain the skills and knowledge necessary to build simple web applications as well as full-stack web applications using modern and scalable web technologies and increase employability as a full-stack developer. The students are taught the basics of HTML, CSS, JavaScript, PHP, and the basic components of Full Stack development using MERN stack widely used in the industry for developing web pages. Students will learn the use of XHTML and CSS for developing presentable web pages. They will also be able to create dynamic web pages by applying event-handling mechanisms using JavaScript. Students will understand the concepts of cookies and sessions in PHP for creating large web applications. Students will learn the MERN stack that consists of four technologies – MongoDB: a database used to store data in JSON documents, Express.js: a framework for Node.js that provides features for developing web applications, ReactJS – a JavaScript library for building user interfaces and Node.js: an open-source cross-platform JavaScript runtime environment that executes JavaScript code outside of a web browser. Students are trained to create interactive web pages using ReactJS, Node.js, MongoDB, and PHP.

Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Describe the usage of XHTML tags, and CSS for developing presentable web pages.[L-1]
- CO-2.** Develop dynamic web pages by applying event-handling mechanisms using JavaScript.[L-5]
- CO-3.** Develop web pages using cookies, sessions, and databases in PHP.[L-5]
- CO-4.** Describe the concepts of MERN stack used in Full Stack Development and the features and components of ReactJS[L-1]

Sr. No	Units	Unit Outcomes After the successful completion of the unit, the learner should be able to:
1	<p>Unit 1: Basics of XHTML</p> <ul style="list-style-type: none"> • Standard Structure of XHTML document • Difference between HTML and XHTML • Basic Text Markup Elements – <ul style="list-style-type: none"> ○ paragraph <p> , heading tags H1..H6 ○ break, italic, bold, superscript, subscript, emphasis, <hr> • Character entities • Hyperlinks • Images • Lists , , <dl> • tables <table> • division <div> and span • Form Elements <ul style="list-style-type: none"> ○ Label ○ Text boxes - password, button, submit, reset ○ Placeholder ○ Textarea ○ Radio button ○ Checkboxes ○ Button ○ Dropdown <select> 	<p>Demonstrate the use of various XHTML tags for creating web pages.</p>
2	<p>Unit 2 – CSS</p> <ul style="list-style-type: none"> • Introduction to CSS • CSS Properties – text, font, list, color • Selectors <ul style="list-style-type: none"> ○ Simple/Element Selector ○ Id Selector ○ Class Selector ○ Generic Selector ○ Universal Selector ○ Pseudo-class Selector • Types and Levels of Style <ul style="list-style-type: none"> ○ Inline ○ Internal ○ External • CSS Box Model • Background images • Examples using HTML and CSS 	<p>Demonstrate the use of cascading style sheets for creating attractive web pages.</p>
3	<p>Unit 3: Introduction to JavaScript, Event Handling, DOM, and Dynamic Documents with JavaScript</p> <p>Introduction to JavaScript -</p> <ul style="list-style-type: none"> • Overview of JavaScript • JavaScript Syntax • Variables and Data Types • Screen Output and Keyboard Input 	<p>Explain the basic concepts of Java Script, demonstrate and implement pattern matching concepts and create interactive web pages</p> <p>Explain and demonstrate the use of DOM for creating interactive and dynamic event-handling web pages using JavaScript.</p>

	<ul style="list-style-type: none"> ○ alert() ○ confirm() ○ prompt() ○ document.write() ● Controls and Loops ● String Methods ● Arrays ● Functions ● Pattern Matching <p>Event Handling, DOM, and Dynamic Documents with JavaScript -</p> <ul style="list-style-type: none"> ● Document Object Model (DOM) ● DOM tree structure of HTML ● Accessing elements in JavaScript ● Event and Event Handling <ul style="list-style-type: none"> ○ Handling events from body elements ○ Handling events from button elements ○ Handling events from text boxes ● Validations on Forms simple example ● Changing colors and fonts 	
4	<p>Unit 4: PHP Basics and Advance Features</p> <p>PHP Basics –</p> <ul style="list-style-type: none"> ● Introduction and basic syntax of PHP, ● Control Statements with examples ● Output Statements ● String Functions ● Arrays ● Functions <p>PHP Advance Features –</p> <ul style="list-style-type: none"> ● Form Handling ● Cookies and Sessions Management <ul style="list-style-type: none"> ○ Creating cookies and session variables in PHP programs ● Creating a simple database and database operations 	<p>Explain the basics concepts of PHP Explain and demonstrate the usage of various built-in functions of string and arrays in PHP Discuss the use of cookies and sessions in PHP</p>
5	<p>Unit 5: Introduction to MERN</p> <p>Introduction to MERN -</p> <ul style="list-style-type: none"> ● Overview of Full Stack Web Development ● Overview of MERN ● Overview of MERN Components <ul style="list-style-type: none"> ○ ReactJS ○ Node.js ○ Express ○ MongoDB ● Tools and Libraries ● React library <p>Introduction to ReactJS -</p> <ul style="list-style-type: none"> ● React features, benefits, and applications 	<p>Explain the basics of full-stack web development. Discuss the MERN stack and its components. Describe the features and benefits of using ReactJS an open-source JavaScript library Create and execute a simple ReactJS application.</p>

<ul style="list-style-type: none"> • Advantages and disadvantages of ReactJS • ReactJS Vs other Front-End Technologies • ReactJS development environment setup • Creating and executing a new ReactJS project • Folder Structure of ReactJS applications

OMC102 – Computer Networks

Program	Master of Computer Applications
Semester	1
Course Title	Computer Networks
Course Code	OMC102

Course Credits	3
Course Type	Core Course

1. Course Summary

This course deals with the concept and technologies used in modern computer networking and data communication. A computer network interconnects two or more computing devices. Since implementing computer networking software is a highly complex task, it has been implemented in different layers. Every layer has a well-defined service to perform. This course facilitates the students to understand the function of different layers and IEEE standards employed in computer networking. The students are taught the methods to enhance network performance such as routing and congestion control. Fundamental concepts of computer networks, different network models, and topologies are covered.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Explain the principles, mechanisms, and functionalities of network applications, transport layer protocols, network layer design, and link layer services in computer networks.(L2)
- CO-2.** Illustrate the principles and architectures of network applications, including protocols such as HTTP, FTP, SMTP, POP3, IMAP, and DNS.(L2)
- CO-3.** Demonstrate use of different computer network components, including hardware, media, and topologies.(L3)
- CO-4.** Compare error-detection and correction techniques, multiple access protocols, and Ethernet technologies in the context of link layer services and local area networks.(L4)
- CO-5.** Evaluate routing algorithms (such as link-state and distance vector) in terms of their efficiency, scalability, and adaptability to various network environments. (L5)

3. Course Contents

Sr. No	Units
1	<p>Introduction: Data Communication Basics, History of Computer Networking and the Internet. Internet, Protocol, Services. Computer Network: Hardware, Media and topology.</p> <p>Protocol layering: The OSI Reference Model and the TCP/IP protocol stack. Internet Access Networks. Circuit and Packet Switching, Delays: Processing, Queuing, Transmission and Propagation delays.</p>
2	<p>Application Layer: Principles and Architectures of Network Applications. Application Layer Protocols- The Web and http: Persistent and Non-persistent connections, http message format, cookies, proxy server, conditional GET, File Transfer Protocol. Email: SMTP, mail message formats, mail access protocols: POP3, IMAP, MIME.</p> <p>DNS: Services, how it works, Root, Top-Level and Authoritative DNS servers, Resource Records, DNS messages. A simple Introduction to p2p files distribution: Bit Torrent</p>

3	Transport Layer: Introduction and Services, Transport layer in internet, Difference between Connection Oriented and Connectionless services. UDP: Segment structure, checksum in UDP. TCP: the principles behind connection-oriented data transfer, stop-and-wait, Go Back N, Selective Repeat. Connection Establishment, TCP header, Round Trip Time, designing a reliable data transfer protocol.
4	Network Layer: Network Layer Design Issues, Packet Forwarding and Routing, Difference between Virtual Circuits and Datagram networks, The Internet Protocol (IP), Datagram format, IP fragmentation, IPv4 addressing, subnets, CIDR, classful addressing, DHCP, Network Address Translation (NAT). IPv6 Header, Moving from IPv4 to IPv6: tunneling, dual stack and header translation. Routing Algorithms: Link state (LS), Distance Vector (DV). Routing in the Internet: RIP, OSPF & BGP.
5	Link Layer and Local Area Network: Introduction and Services: Service provided by the LL, Implemented. Error-Detection and Correction Techniques: Parity checks, Check-summing methods, Cyclic Redundancy Check (CRC). Multiple Access protocols: Channel partitioning, Random access. Ethernet: Frame structure, CSMA/CD, Ethernet technologies. Signals- analog and digital signals, periodic and a periodic signal, Digital Data Conversion: unipolar, polar, bipolar. Analog data conversion: - PAM, PCM, sampling. Modulation techniques: - ASK, FSK, PSK, AM, FM, PM.

MCA 1st Semester – Programming and Problem-Solving

Program	Master of Computer Applications
Semester	1
Course Title	Programming and Problem-Solving
Course Code	OMC103
Course Credits	3
Course Type	Core Theory

1. Course Summary

The aim of this course is to familiarize the students with the fundamental concepts of computational thinking, problem-solving strategies, and programming in C language. This course provides knowledge of writing C programs using arrays and strings, structures and unions, simple user-defined functions as well as recursive functions, and implementing file operations such as opening, closing, reading, and writing to files. The students are taught how to choose an appropriate C construct to solve a given problem statement.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Describe the fundamental concepts of computational thinking and problem-solving strategies. [L-1]
- CO-2.** Demonstrate the use of arrays, strings, structures, and unions in the ‘C’ programming language. [L-3]
- CO-3.** Demonstrate the use of re-useable code using functions in ‘C’. [L-3]
- CO-4.** Describe and implement file handling mechanism in ‘C’ programs. [L-3]

3. Course Contents

Sr. No	Units
1	Unit 1 – Computational Thinking, Problem Solving, and Programming Concepts Computational Thinking - <ul style="list-style-type: none">• What is computational thinking?• Computational thinking approaches• Information and Data – Converting Information to Data• Data Types and Encoding Problem-Solving and Programming Concepts – <ul style="list-style-type: none">• Problem-Solving techniques

OMC104- Advanced Operating Systems

Program	Master of Computer Applications
Semester	1
Course Title	Advanced Operating Systems
Course Code	OMC 104
Course Credits	3
Course Type	Core Theory Course

1. Course Summary

This course is designed to build on the foundational knowledge acquired in the previous course by exploring advanced topics in the subject. Students will delve into resource management, including file and storage management, as well as the concepts and mechanisms related to data protection and security features of an operating system. The course covers various types of operating systems, including those developed for real-time, parallel, distributed, and cloud computing environments. A case study of two popular operating systems, Windows and Linux, is also included in the course to help students analyze their design, architecture, and functionality

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** List the functions and purposes of modern operating systems. [L-1]
CO-2. Describe the file and storage management concepts. [L-2]
CO-3. Differentiate between the protection and security features of an operating system and its implementation mechanisms. [L-4]
CO-4. To interpret the concept of virtualization and describe its advantages, and need. [L-5]
CO-5. To analyze and compare the design, features, and functionality of Linux, and Windows operating systems through a case study. [L-5]

3. Course Contents

Sr. No.	Units
1	<p>Unit 1: 10 Hrs</p> <p>File and Storage Management</p> <ul style="list-style-type: none"> • Overview of OS Objectives and Functions • Files and File systems • File organization and Access • File Directory and Sharing • Secondary storage management <p>Protection and Security</p> <ul style="list-style-type: none"> • Goals of Protection • Principles of Protection • Domain of Protection • Access Control
2	<p>Unit 2: (10 hrs)</p> <p>Real-Time Operating System (RTOS)</p> <ul style="list-style-type: none"> • Background • Characteristics of Real-Time Operating Systems • Types of RTOS • RTOS kernel and function • Task Management • Real-Time Scheduling • Application Example
3	<p>Unit 3: (10 hrs)</p> <p>Distributed Systems</p> <ul style="list-style-type: none"> • Advantages of Distributed Systems • Distributed Operating Systems • Types of Distributed Operating Systems • Robustness and Design Issues of Distributed OS <p>Parallel Systems</p> <ul style="list-style-type: none"> • Definition, Parallel vs Distributed Systems, Example • Types of Parallel Systems: Overview
4	<p>Unit 4: (10 hrs)</p> <p>Virtualization</p> <ul style="list-style-type: none"> • Definition, Advantages, and Needs • Types

	<ul style="list-style-type: none"> • Building Block Diagram • Example Cloud Operating Systems <ul style="list-style-type: none"> • Goals and working • Examples of Cloud Operating Systems
5	Unit 5 (10 hrs) Case Studies A comparative analysis of Linux and Windows 7 operating systems based on, <ul style="list-style-type: none"> • Architecture • Process Management • Memory Management • Security features

OMC105A – Advanced Computer Organization

Program	Master of Computer Applications
Semester	1
Course Title	Advanced Computer Organization
Course Code	OMC105A

Course Credits	3
Course Type	Elective Course

1. Course Summary

This course covers fundamental concepts and advanced topics in computer organization. It includes computer fundamentals, computer systems, the central processing unit (CPU), the processor, parallel organization, general-purpose graphic processing units (GPUs), and control unit operation. Students learn about computer evolution, performance issues, memory systems, I/O modules, instruction sets, and processor structure. They explore parallel processing, multicore computers, and GPU architecture. By the end of the course, students will have a comprehensive understanding of computer organization and be prepared to analyze and optimize computer systems.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Describe the organization and architecture of computer systems, including their components and interconnection structures.(L2)
- CO-2.** Use Ahmdahl's Law and Little's Law to analyze and predict performance issues in computer systems.(L3)
- CO-3.** Compare different measures of computer performance and calculate relevant performance metrics to assess system efficiency.(L4)
- CO-4.** Analyze the organization and structure of processors, including register organization, instruction cycle, and the concept of instruction pipelining.(L4)
- CO-5.** Evaluate the design issues related to instruction-level parallelism and superscalar processors. (L5)

3. Course Contents

Sr. No	Units
1	<p>Introduction to the computer system:</p> <p>Basic Concepts and Computer Evolution: Organization and Architecture, Structure and Function, A Brief History of Computers, The Evolution of the Intel x86 Architecture, Embedded Systems</p> <p>Performance Issues:Two Laws that Provide Insight: Ahmdahl's Law and Little's Law, Basic Measures of Computer Performance, Calculating the Mean, Benchmarks and Spec.</p> <p>Top-Level View of Computer Function and Interconnection: Computer Components, Computer Function, Interconnection Structures, Bus Interconnection, Point-to-Point Interconnect</p> <p>Memory: Computer Memory System Overview, Cache Memory Principles, Elements of Cache Design, Semiconductor Main Memory, DDR DRAM</p> <p>Input/Output: External Devices, I/O Modules, Programmed I/O, Interrupt-Driven I/O, Direct Memory Access</p>

2	The Central Processing Unit Instruction Sets: Characteristics and Functions: Machine Instruction Characteristics, Types of Operands, Types of Operations Instruction Sets: Addressing Modes and Formats: Addressing Modes, Instruction Formats, Assembly Language
3	The Processor Processor Structure and Function: Processor Organization, Register Organization, Instruction Cycle, Instruction Pipelining Instruction-Level Parallelism and Superscalar Processors: Overview, Design Issues, Intel Core Microarchitecture
4	Parallel Organization Parallel Processing: Multiple Processor Organizations, Symmetric Multiprocessors, Cache Coherence and the MESI Protocol, Multithreading and Chip Multiprocessors Multicore Computers: Hardware Performance Issues, Software Performance Issues, Multicore Organization, Heterogeneous Multicore Organization.
5	General-Purpose Graphic Processing Units Cuda Basics, GPU versus CPU, GPU Architecture Overview Control Unit Operation Micro-Operations , Control of the Processor , Hardwired Implementation, Microprogrammed control.

OMC105B – Green Computing

Program	Master of Computer Applications
Semester	1
Course Title	Green Computing
Course Code	OMC105B
Course Credits	3
Course Type	Core Course

1. Course Summary

The Green Computing course is designed to introduce students to the principles, practices, and technologies involved in sustainable computing. The course focuses on the environmental impact of information and communication technologies (ICT) and explores methods to reduce energy consumption, promote resource efficiency, and minimize electronic waste. Students will gain a comprehensive understanding of the concepts and strategies behind green computing and its relevance in today's digital world.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Understand the concept of Green Computing and its significance in promoting environmental sustainability within the IT industry. [L-2].
- CO-2.** Apply energy efficiency techniques to computing systems, including power management [L-3].
- CO-3.** Evaluate the potential of renewable energy sources and their application in computing infrastructure[L-5].
- CO-4.** analyze resource management strategies and waste reduction practices in computing environments[L-4].
- CO-5.** Demonstrate knowledge of virtualization, cloud computing, and data centers in achieving green IT objectives. [L-5].
- CO-6.** Apply sustainable software development practices, including energy-aware programming and software optimization. [L-4].

3. Course Contents

Sr. No	Units	Unit Outcomes
1	Unit 1: Introduction to Green Computing <ul style="list-style-type: none"> • Definition, goals, and benefits of Green Computing • Environmental challenges in computing • Importance of sustainability in the IT industry • Power management techniques 	After the successful completion of the unit, the learner should be able to: <ol style="list-style-type: none"> 1. Understand the concept of Green Computing and its importance in addressing environmental challenges in the IT industry. 2. Identify the goals and benefits of Green Computing practices. 3. Analyze the environmental impact of conventional computing practices and the need for sustainable alternatives.

2	Unit 2: Resource Management, Waste Reduction and Renewable Energy <ul style="list-style-type: none"> Virtualization and server consolidation Efficient cooling and data center design E-waste management and recycling Green procurement and disposal practices Solar, wind, and other renewable energy sources Renewable energy applications in data centers Energy harvesting techniques Green energy certifications and standards 	<ol style="list-style-type: none"> Implement virtualization and server consolidation techniques to optimize resource utilization. Develop strategies for e-waste management and implement recycling practices in computing environments. Assess the potential of renewable energy sources and their integration into computing infrastructure.
3	Unit 3: Cloud Computing and Green Data Centers <ul style="list-style-type: none"> Virtualization and cloud computing technologies Green data center design and operation Energy-efficient storage and networking Green cloud service providers and sustainability considerations. 	<ol style="list-style-type: none"> Analyze the role of virtualization and cloud computing in achieving green IT objectives. Design and implement energy-efficient storage and networking solutions in cloud environments. Evaluate and select green cloud service providers based on sustainability considerations.
4	Unit 4: Sustainable Software Development <ul style="list-style-type: none"> Green software engineering practices Energy-aware programming techniques Software optimization and performance tuning Green metrics and environmental impact assessment 	<ol style="list-style-type: none"> Apply green software engineering practices to develop energy-efficient software solutions. Optimize software performance and resource utilization for reduced energy consumption. Assess the environmental impact of software development decisions and propose sustainable alternatives.
5	<ul style="list-style-type: none"> Unit 5: Environmental Considerations in IT Infrastructure Life cycle assessment and eco-design Green IT policy and governance Sustainable IT procurement and supply chain management Green data management and storage solutions 	<ol style="list-style-type: none"> Conduct life cycle assessments and implement eco-design principles in IT infrastructure planning. Develop and implement green IT policies and governance frameworks. Evaluate and implement sustainable IT procurement and supply chain management practices.

OMC105C - Discrete Structures and Combinatorics

Program	Master of Computer Applications
Semester	1
Course Title	Discrete Structures and Combinatorics
Course Code	OMC105C
Course Credits	3
Course Type	Core Theory Course

1. Course Summary

The goal of this course is to lay a strong foundation for the discrete structures and combinatorics among learners. This course has been started by explaining the basics of set theory, relations and functions for a better understanding of the learners. The learners are taught the importance of proposition logic and mathematical induction. The learners are also taught how to compare and analyze mathematical problems in the context of group theory. In the subsequent lessons, various types of graph theory related concepts have been discussed and explained to the learners. In this course, the concepts of combinatorics have been discussed in depth including Fundamental Principles, Factorial Notations, Permutations, Combinations, Binomial Theorem, and Multinomial coefficients. In this course, various concepts related to counting principles, such as Pigeonhole Principle and Inclusion-Exclusion Principle have been explained to the learners. This course also emphasizes Discrete Numeric Functions including Recurrence relations and Generating Functions.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO-1. Define basic mathematical objects such as sets, functions, relations and other mathematical structures [L-1]

CO-2. Express mathematical properties formally via the formal language of propositional logic [L-2]

CO-3. Perform various techniques of mathematical induction (weak, strong and structural induction) on variety of discrete structures [L-3]

CO-4. Categorize and analyze problems based on group theory and graph theory [L-4]

CO-5. Determine and select appropriate counting techniques to solve combinatorial problems [L-5]

3. Course Contents

OMC105D – Cloud Computing

Program	Master of Computer Applications
Semester	1
Course Title	Cloud Computing
Course Code	OMC105D
Course Credits	3
Course Type	Core Course

1. Course Summary

The course provides a comprehensive overview of cloud computing, covering key topics such as an introduction to the cloud, compute services, storage services, database services, and network services. Students gain a solid understanding of the fundamental concepts and principles of cloud computing, including its significance in modern technology. They explore different types of compute services, such as virtual machines and containers, and learn about configuring and managing compute nodes. The course also delves into various storage options available in the cloud, including file storage, block storage, and storage for backups, while discussing their advantages and considerations. Students gain insights into cloud-based database services, including relational databases, key-value databases, and time series databases, and understand the architectural considerations and data models associated with databases in the cloud. Lastly, they explore network services in the cloud, focusing on building and scaling cloud networks, securing network traffic, and the role of content delivery networks.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Classify various cloud computing services and models[L-2].
- CO-2.** Use different compute services in cloud with a case study[L-3].
- CO-3.** Analyze the benefits and challenges of using cloud-based data storage in comparison to traditional on-premises storage. [L-4].
- CO-4.** Evaluate the trade-offs between different database features and characteristics, such as consistency, durability, and query capabilities. [L-5].
- CO-5.** Illustrate various security mechanisms and services available for securing network traffic, such as virtual private clouds (VPCs), network security groups (NSGs), and web application firewalls (WAFs). [L-4].
- CO-6.** Explain the concept and benefits of a content delivery network (CDN) in distributing and delivering content to users. [L-2].

3. Course Contents

Sr. No	Units	Unit Outcomes After the successful completion of the unit, the learner should be able to:
1	Unit 1: Fundamentals of Cloud Computing <ul style="list-style-type: none"> • Introduction • Cloud Types • Deployment Models • Service Models • Virtualization • Cloud architecture • Case Study: Amazon Web Services, Microsoft Azure. 	4. Discuss the evolution of cloud computing and its impact on various industries. 5. Analyze real-world examples of organizations using different cloud types and their use cases. 6. Describe the components and layers of cloud architecture (e.g., infrastructure, platform, software).
2	Unit 2: Compute Services of Cloud Computing <ul style="list-style-type: none"> • Compute Node Architecture • Types of Compute nodes: Virtual Machines & Containers • Configuration of Compute node. • Case study: Amazon EC2, Virtual Box, Docker. 	4. Explain the components and functionalities of a compute node, such as processors, memory, storage, and networking. 5. Discuss the advantages and disadvantages of using VMs and containers for deploying applications. 6. Describe the process of configuring a compute node for deployment.
3	Unit 3: Storage Services in Cloud Computing <ul style="list-style-type: none"> • Introduction to Cloud based Data Storage • Advantages and disadvantages of Cloud based data Storage • Types of cloud storage: File storage, • Block storage-Elastic Block Storage. • Storage for backups • Case Study: Amazon S3, EBS, EFS, Glacier 	4. Analyze the benefits and challenges of using cloud-based data storage in comparison to traditional on-premises storage. 5. Identify the advantages of cloud-based data storage, such as scalability, cost-effectiveness, and accessibility. 6. Describe block storage and its use in cloud environments, specifically focusing on Elastic Block Storage (EBS) offered by cloud providers.
4	Unit 4: Database Services in Cloud Computing <ul style="list-style-type: none"> • Need for Cloud Databases • Consideration for databases 	4. Explain the reasons and benefits of using cloud databases in modern data management. 5. Discuss the factors to consider when selecting a suitable database solution for specific use cases, including workload requirements, data

	<ul style="list-style-type: none"> • Database architecture • Data Models • Relational Databases • key-value based databases • Time series databases • Case study: Amazon RDS, DynamoDB 	<p>volume, and data access patterns.</p> <p>6. Explain the components and layers of a typical database architecture, including the storage layer, query processing layer, and access interfaces.</p>
5	<p>Unit 5: Networking and Security Services</p> <ul style="list-style-type: none"> • Building Cloud network • Scaling Cloud Network • Securing Network Traffic • Content Delivery Network • Case study: Amazon VPC, Route S3 	<ol style="list-style-type: none"> 1. Discuss the best practices for configuring networking services, such as load balancers, virtual private networks (VPNs), and firewalls, in a cloud environment. 2. Explain the concepts of horizontal and vertical scaling in the context of cloud networks. 3. Identify the security risks and threats associated with network traffic in a cloud environment. 4. Discuss the architecture and components of a CDN, including edge servers, caching mechanisms.

MCA 1st Semester – Full Stack Development Laboratory

Program	Master of Computer Applications
Semester	1
Course Title	Full Stack Development Laboratory
Course Code	OMC 108
Course Credits	2
Course Type	Laboratory

1. Course Summary

The aim of this course is to gain the skills and knowledge necessary to build simple web applications as well as full-stack web applications using modern and scalable web technologies and increase employability as a full-stack developer. The students are taught the basics of HTML, CSS, JavaScript, PHP, and the basic components of Full Stack development using MERN stack widely used in the industry for developing web pages. Students will learn the use of XHTML and CSS for developing presentable web pages. They will also be able to create dynamic web pages by applying event-handling mechanisms using JavaScript. Students will understand the concepts of cookies and sessions in PHP for creating large web applications. Students will learn to develop simple ReactJS applications.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Demonstrate the usage of XHTML tags, and CSS for developing presentable web pages.[L-3]
- CO-2.** Develop dynamic web pages by applying event-handling mechanisms using JavaScript.[L-5]
- CO-3.** Demonstrate the use of COOKIES and SESSION in PHP. [L-3]

CO-4. Develop simple ReactJS applications.[L-5]

3. Course Contents - Laboratory Programs List

1. Create an XHTML page that provides information about the MCA department, at Graphic Era University. The XHTML page must use the following tags:
 - Anchor tag
 - Images
 - Links
 - Tables(if needed use other tags for better presentation)
2. Create an XHTML page that demonstrates the usage of lists and tables.
3. Create an XHTML page that displays a Form with all types of controls (Text Boxes, Radio buttons, Checkboxes, Dropdown, Submit and Reset buttons) on it with proper formatting.
4. Develop a web page and demonstrate the usage of inline style, internal style, and external style sheets using CSS.
5. Write a JavaScript function called "MaxandMinofArray" that accepts an array of integers as a parameter and displays the largest and smallest number in the array. Test the function with different inputs. Embed the JavaScript function within the XHTML document.
6. Write a JavaScript function called "SumofDigits" that accepts a number as a parameter and returns the sum of all digits of that number. Test the function with different inputs. Write the JavaScript function in a separate .js file.
7. Create an XHTML document with two buttons. Write a JavaScript function that triggers an alert message when the button is clicked. It should display the message "First button is clicked" or "Second button is clicked" depending on the button being clicked.
8. Create an XHTML page with 3 paragraphs displayed using different colors. Implement a JavaScript function that changes the font color of a paragraph to blue when a user hovers over it and reverts it back to the original color when the mouse leaves.
9. Create an XHTML document with a form that collects the mobile number. On submitting the form validate the input using an event handler. The mobile number should be a 10-digit number. On validating display, a success or failure message using "alert()".
10. Write a PHP program using COOKIE to store the current date and time and on reopening the same web page display the "Last visited date and time".
11. Write a PHP program to demonstrate the use of SESSIONS to increment a count on each page refresh, and display the same on the web page.
12. Create a React Application to display the message "Developing using ReactJS, Graphic Era University".

4. Course Articulation Matrix (CO-PO-PSO Map)

	Programme Outcomes (POs)												Programme Specific Outcomes (PSOs)			
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2	PSO-3	PSO-4

OMC109 – Operating system & Computer Networks Laboratory

Program	Master of Computer Applications
Semester	1
Course Title	Operating system & Computer Networks Laboratory
Course Code	OMC109
Course Credits	2
Course Type	Core Course

1. Course Summary

The Operating System and Computer Network Lab course offers practical experience in computer networks and operating systems. Students learn network commands, configure network

devices, implement point-to-point networks, and analyze network performance. They also simulate CPU scheduling algorithms, memory management techniques, disk scheduling algorithms. This hands-on approach enhances their understanding of network protocols, resource allocation, and system performance. By completing the term works, students gain valuable skills in network configuration, command-line tools, and practical implementation of operating system algorithms..

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Explain the use of network commands in command prompt to diagnose and troubleshoot network connectivity issues. (L2)
- CO-2.** Configure and demonstrate the use of hub, switch, and router in a simple network topology.(L3)
- CO-3.** Analyze the impact of queue size and bandwidth on network performance by implementing a point-to-point network with varying parameters and observing packet drops.(L4)
- CO-4.** Simulate CPU scheduling algorithms such as FCFS and SJF and analyze their performance using different process arrival times and burst times .(L4)
- CO-5.** Implement an Ethernet LAN with multiple traffic nodes, and evaluate congestion window behavior for different source/destination pairs. (L5)

3. Course Contents

Sr. No	Units
	Computer Networks
1	Demonstrate network commands in command prompt.(like ping,traceroute)
2	Demonstrate use of hub, switch, router using simple topology.
3	Implement three nodes point – to – point network with duplex links between them. Set the queue size, vary the bandwidth and find the number of packets dropped.
4	Implement an Ethernet LAN using n nodes and set multiple traffic nodes and plot congestion window for different source / destination.
5	Demonstrate static routing.
6	Demonstrate dynamic routing protocols.

	Operating systems
7	Simulate the following CPU scheduling algorithms-FCFS,SJF
8	Simulate the following Memory management algorithm-First fit, Best fit
9	Implement the optimal page replacement algorithm
10	Implement the FCFS Disk scheduling and SSTF Disk scheduling
11	Implement the producer consumer problem with solution using semaphore
12	Implement a program in C to extract process ID (PID) and parent process ID (PPID).

Note: The computer networks termworks can be implemented using a suitable simulator like CISCO packet tracer, GNS3 etc. The operating system termworks can be implemented using a suitable programming language like C,C++ etc.

4. Course Articulation Matrix (CO-PO-PSO Map)

	Programme Outcomes (POs)												Programme Specific Outcomes (PSOs)			
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2	PSO-3	PSO-4

MCA 1st Semester – Programming and Problem-Solving Laboratory

Program	Master of Computer Applications
Semester	1
Course Title	Programming and Problem-Solving Laboratory
Course Code	OMC 110
Course Credits	2
Course Type	Laboratory

1. Course Summary

The aim of this course is to gain the skills, hands-on experience, and practical knowledge necessary to write programs using 'C' language. The Students will learn to develop algorithms, draw flowcharts and write a 'C' program to solve a given problem. They will learn to use the online GDB 'C' Debugger/Compiler for programming, debugging, and executing the programs. The students are taught the basics of 'C' Programming which also provides a base for learning any other computer-related languages. Students will learn the use of conditional statements and loops, explore the concepts of arrays, and understand the concepts of modular programming and reusable code using functions. Students learn about memory management and dynamic data structures through the use of pointers. They will also be able to create user-defined data types called structures. Additionally, they will understand file-handling mechanisms for storing and retrieving data. Students will learn the techniques of debugging and testing 'C' programs.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Develop an algorithm, draw a flowchart, and write a 'C' program to solve a given problem. [L-3]
- CO-2.** Make use of online GDB 'C' Debugger/Compiler for programming, debugging, and executing the programs.
- CO-3.** Demonstrate the use of expressions, decision structures, loops, functions, library functions, recursive functions, arrays, strings, structures, pointers, and files in problem-solving.[L-3]
- CO-4.** Document the conclusion and observations made from the implementation.[L-4]

3. Course Contents - 'C' Programming Laboratory Program List

1. Write a 'C' program to evaluate an expression $ax^2 + bx + c$.
2. Write a 'C' program to find the sum of the first n even natural numbers by using the formula $n(n+1)$
3. Write a 'C' program to find whether the given year is a Leap year.
4. Write a 'C' program to accept input and print whether the given input is a character, digit, or special symbol using a switch-case.
5. Write a 'C' program to accept the month number and print the month name using switch-case
6. Write a 'C' program to find the maximum and minimum numbers of an array of integers.
7. Write a 'C' program to find the transpose of a given matrix.
8. Write a 'C' program that finds the sum of diagonal elements of a given square matrix.
9. Write a 'C' program to read an integer and find the sum of digits. Use a function for finding the sum of digits.
10. Write a 'C' program to find convert a decimal number to a binary number. Use recursive function.
11. Write a C program to perform the following operations on a string.
 - a) Count the number of characters and digits.
 - b) Check whether the given string is palindrome or not.
12. Write a 'C' program to swap two numbers. [Demonstrate the difference between call by value and call by reference for swapping the two numbers]
13. Write a 'C' program to store and retrieve the personal information about students – Enrolment Number, Name, Address, City, and State. Demonstrate using files.
14. Write a 'C' program to find
 - a) The frequency of characters that are in a sentence stored in a text file.
 - b) Count the number of words in a file.

The file name is to be supplied as a command-line argument.

4. Course Articulation Matrix (CO-PO-PSO Map)

	Programme Outcomes (POs)												Programme Specific Outcomes (PSOs)			
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2	PSO-3	PSO-4

OMC 106 Career Skills-I

Learning Outcomes:

LO 1 Apply logic to the different types of arrangement-based questions and arrive at solutions to deterministic and nondeterministic question sets.

LO 2 Apply the concept of blood relations and learn to draw a family tree using the different notations.

LO 3 Solve the different types of questions based on orientation of direction and understanding of distances and turns.

LO 4 Learn to construct a Venn diagram using multiple statements and arrive at conclusions or possibilities based on logic.

LO 5 Comprehend different types of data sets used in Data Interpretation and use quick calculation techniques for solving different types of questions.

UNIT 1:

3 Hours

Introduction to reasoning, basic concepts, and practice of deterministic and nondeterministic arrangement-based questions (linear, vertical, circular and rectangular).

Concepts and understanding of deterministic and nondeterministic tabular or grid-based questions including understanding of variables and their entries in the solution table. Practice of tabular or grid-based question sets.

UNIT 2:

3 Hours

Blood relation concepts include basic introduction, making a family tree, standard notations and names for gender and relations. Discussion of different types of questions asked in blood relations, their solutions and practice.

Concepts and practice of grouping/team formation or condition-based questions including the understanding and application of different conditions used in grouping sets.

UNIT 3:

3 Hours

Basic concept and understanding of directions including the orientation of the 4 basic directions of east, west, north, and south. Understanding turns of different degrees towards right, left, clockwise and anticlockwise.

Basic concept of coding-decoding using alphabets, digits, words and their combinations. Understanding and practice of different questions in coding decoding.

Basic concept of series completion using numbers, alphabets, and their combinations thereof. Understanding of different types of series (based on differences, based on products, based on exponentials).

UNIT 4:**3 Hours**

Introduction to Data Interpretation (DI), understanding different methods of data representation including tabular, bar graph, pie chart, line graph and caselet. Techniques of quick arithmetic calculations, concepts of percentage as applicable in DI, growth and growth rate and practice of various DI sets.

UNIT 5:**3 Hours**

Understanding the concepts of Syllogism using Venn diagram, types of problems in syllogism (2 statements, 3 statements and 6 statement problems).

Reference books and study material:

1. Lalit Singh and P.A.Anand, Verbal Ability and Reasoning for Competitive Exams, Wiley, First Edition, January 2016.
2. R.S.Aggarwal, A Modern approach to Verbal and Non-Verbal Reasoning for Competitive Exams, S Chand Publication, January 2018
3. Shakuntala Devi, Puzzles to Puzzle you, Orient Paperbacks, June 1976.
4. George Summers, The great book of Puzzles and Teasers, Jaico Publishing, September 1989.
5. P.A.Anand, reasoning book, Savera publication.
6. Any other reading as suggested by the faculty.

MCA II Semester Syllabus

OMC 201- Advanced Database Management Systems

Program	Master of Computer Applications
Semester	2
Course Title	Advanced Database Management Systems
Course Code	OMC 201
Course Credits	3
Course Type	Core Theory Course

1. Course Summary

The goal of this course is to lay a strong foundation for advanced database management systems among learners. This course started by explaining the core concepts of database management systems for a better understanding of the learners. The learners are taught the Enhanced Entity Relationship concepts and tools including Subclasses, Super class, and Inheritance, Specialization and Generalization. The learners are also taught the basics of functional dependencies and normalization. Enhanced Entity relationship diagrams are demonstrated with the help of case studies. In the subsequent lessons, Query Processing, Optimization & Database Tuning including Heuristics for Query Optimizations, Measures of Query Cost, Evaluation of Expression, Transformation of Relational Expressions, Estimating Statistics of Expression have been discussed and explained to the learners. In this course, the concept of SQL has been discussed in depth. Basic as well as advanced SQL queries are explained with the help of suitable examples and case studies. In this course, various concepts related to Transaction Processing and Management, such as Multiple Granularity, Multi-version Schemes, Deadlock Handling, Weak Levels of Consistency, Concurrency in Index Structures and Recovery techniques have been explained to the learners. This course also emphasizes types of database systems including parallel and distributed databases and related concepts.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Define and Express real world problems using Enhanced Entity Relationship tools and concepts of Normalization [L-1]
- CO-2.** Select the appropriate database for implementing the applications. [L-2]
- CO-3.** Assess the processing of different levels of operations and queries [L-3]
- CO-4.** Analyze the importance of concurrency control, recovery techniques and security in Transaction Management[L-4]
- CO-5.** Design solutions for real world problems in the context of database and Implement these solutions using SQL. [L-6]

3. Course Contents

Sr. No	Units
1	<p>Unit 1: Introduction</p> <ul style="list-style-type: none"> • Database System Concepts and Architecture: Three - Schema Architecture and Data Independence. <p>Enhanced Entity Relationship Model:</p> <ul style="list-style-type: none"> • Introduction to ER Model • Enhanced ER tools, Subclasses, Super class, and Inheritance, • Specialization and Generalization, • Constraints and Characteristics of Specialization and Generalization. • Converting EER diagram to tables. <p>Introduction to Relational Model</p> <ul style="list-style-type: none"> • Relational Algebra Operations • Basic Queries
2	<p>Unit 2: Query Processing, Optimization & Database Tuning:</p> <ul style="list-style-type: none"> • Heuristics for Query Optimizations • Measures of Query Cost, Evaluation of Expression, Transformation of Relational Expressions. • Physical Database Design In Relational Databases, Factors that Influence Physical Database Design. • Physical Database Design Decisions, Database Tuning In Relational Systems. <p>Functional dependency theory and normalization</p> <ul style="list-style-type: none"> • Functional Dependencies and normal forms based on functional dependencies • Multi value dependency and 4NF • Join Dependency and 5NF

OMC202 – Advanced Java Programming

Program	Master of Computer Applications
Semester	2
Course Title	Advanced Java Programming
Course Code	OMC202
Course Credits	3
Course Type	Core Theory Course

1. Course Summary

The aim of this course is to gain the skills and knowledge necessary to build simple applications using Advanced Java Programming. The students are taught the concepts of classes and objects, string handling, exception handling, inheritance, packages and interfaces, and their implementation in Java. Students are taught the use of I/O streams in Java. The students also learn the concepts of creating and using servlets and handling client requests and server responses. Students learn to use GET and POST methods for passing form data to Servlets. This course also emphasizes on the advantages of cookies and sessions. Students are trained to develop server-side code using Servlets and Java Server Pages. Students learn to apply the concepts of exception handling for developing efficient JAVA applications to handle run-time errors. They learn the basics of Java Beans and Java database connectivity(JDBC).

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Describe the concepts of object-oriented programming, method overloading, arrays, string handling, and reusable code by the use of inheritance, interfaces, polymorphism, threads, networking, and event handling in Java. [L-1]
- CO-2.** Explain the concepts of Servlets and JSP in developing server-side code.[L-2]
- CO-3.** Explain the concepts of Java Beans and Java Database connectivity.[L-2]
- CO-4.** Apply the concepts of exception handling for developing efficient JAVA applications to handle run-time errors.[L-3]
- CO-5.** Develop applications using GET and POST methods for passing data to Servlets.[L-6]

3. Course Contents

Sr. No	Units
1	<p>Unit-1: Java classes, Arrays, and String Handling</p> <p>Java Classes:</p> <ul style="list-style-type: none"> • Generic form of JAVA class – • Simple JAVA class program • Objects – declaration, and instantiation • Methods - Adding methods to a class, returning a value, passing parameters to a method • Constructor – Default, Parameterized constructor, “this” keyword within constructor and methods • Overloading Methods and Constructors • Static variables, methods • Nested and Inner classes • Command line arguments • Variable length arguments • Garbage Collection <p>Arrays and String Handling:</p> <ul style="list-style-type: none"> • Arrays one and two dimensional • Array Objects and Wrapper Classes • String literals • String concatenation • String comparison (few frequently used methods) - equals() and equalsIgnoreCase(), regionMatches(), startsWith() and endsWith() , compareTo() • String modifying methods - substring(), concat(), replace(), trim() • StringBuffer methods - length() and capacity(), setLength(), charAt(), setcharAt(), getChars(), append(), insert() and reverse(), delete() and deleteCharAt(), replace() and substring() • StringBuilder
2	<p>Unit-2: Inheritance, Interfaces, and Packages</p> <p>Inheritance:</p> <ul style="list-style-type: none"> • Inheritance basics • Access Control – private, public, default, and protected • Single and Multilevel inheritance JAVA program • Order of execution of constructors in multilevel • Usage of super keyword • Method overriding • Polymorphism - Dynamic method dispatch • Abstract class • Final Keyword <p>Interfaces and Packages:</p> <ul style="list-style-type: none"> • Defining an interface • Implementing interface • Multilevel Interface Inheritance • Difference between Abstract class and Interface

	<ul style="list-style-type: none"> • Overview of Packages • Jar files, sub packages, static import
3	<p>Unit-3: Exception Handling, Overview of Threads, Java I/O Streams, Networking and Event handling</p> <p>Exception Handling and Threads</p> <ul style="list-style-type: none"> • Exceptions and Handling Exception - Using try, catch, and finally, Catching Multiple Exceptions • Throwing Exceptions - throw and throws clause • JAVA built-in exceptions • Creating own exception subclasses • Concept of try with resource • Overview of threads and synchronization <p>Overview of Java I/O Streams, Networking, and event handling</p> <ul style="list-style-type: none"> • Byte streams Classes - InputStream, OutputStream, FileInputStream, FileOutputStream, ByteArrayInputStream, ByteArrayOutputStream • BufferedByte Stream classes - BufferedInputStream, BufferedOutputStream • Character Streams – Reader, Writer, FileReader, FileWriter, BufferedReader, BufferedWriter • Object Serialization • Overview of Networking Concepts in Java • Delegation Event Model in Java
4	<p>Unit 4: Servlets and Handling Client Requests and Servlets Responses</p> <p>Servlets:</p> <ul style="list-style-type: none"> • Servlets basics, Advantages of Servlets • Servlet API • Basic Structure of a Servlet - Servlet generating plain text, Servlet generating HTML • Servlet Life Cycle, Single Thread Model Interface <p>Handling Client Requests and Servlets Responses</p> <ul style="list-style-type: none"> • Handling Client Request <ul style="list-style-type: none"> • Handling Form data with doGET and doPOST methods • HTTP Request headers • Generating Server Response <ul style="list-style-type: none"> • HTTP Status code • HTTP Response headers • Examples for handling Client Requests and Servlet Responses
5	<p>Unit-5: Cookies and Sessions, Introduction to JSP, JavaBeans, and JDBC</p> <p>Cookies and Sessions:</p> <ul style="list-style-type: none"> • Overview of Cookies • Advantages and disadvantages of cookies • Cookie class and methods • Creating, reading, and deleting Cookies • Session Tracking, Overview of Sessions • Creating sessions

	<p>Introduction to JSP, JavaBeans, and JDBC:</p> <ul style="list-style-type: none"> • Overview of JSP - Need and benefits of JSP, Advantages of JSP over Servlets • JSP Architecture • Life Cycle of JSP • Creating a Simple JSP script • Overview of JavaBeans • JavaBean Properties and example • Overview of JDBC • Database Connectivity and Statement Objects • Creating a simple JDBC application

OMC 203 - Advanced Data Structures

Program	Master of Computer Applications
Semester	2
Course Title	Advanced Data Structures
Course Code	OMC 203
Course Credits	3
Course Type	Core Theory Course

UNIT 1

Introduction: Basic Terminology, Pointer and dynamic memory allocation.

Array Representation of stack, Linked Representation of Stack, Infix, Prefix and Postfix Expressions.

Queues: Array and linked representation and of queues, Circular queue, D-queue, and Priority Queue.

Linked list: Representation of Singly Linked Lists, Two-way Header List, circular linked list and Doubly linked list.

UNIT II

Non linear data structures : General Trees, Operations, Trees traversals ,Binary Trees, Operations on binary trees, Conversion of a general tree to binary, Huffman's algorithm ,Applications of trees ,Graphs- BFS, DFS. Spanning tree: Minimum Spanning tree, kruskal's Algorithm, Prim's Algorithm, Floyd-Warshall algorithm and Dijkstra's Algorithm.

UNIT III

Sorting: Growth of function, -'Big-Oh', Theta, Omega notation, Complexity of algorithm, Notation of algorithm complexity. Bubble sort, Insertion sort, Selection sort, Quick sort, Merge sort.

UNIT IV

Advance Searching techniques, Search trees traversals, threaded binary search trees, Inserting, and deleting nodes in a binary search tree, Height balanced (AVL) tree, concept and construction. Heap: min heap and max heap. Hashing Techniques, Hash function, common hash functions. Collision resolution techniques : Linear probing, Double hashing. Bucket addressing, rehashing.

UNIT IV

File Structures: Concept of record, File Operations: Create, update, and delete. File design considerations. File systems organization: Sequential, Relative, Indexed and Random-access Mode, Direct mapping techniques: Absolute, relative, and indexed sequential files (ISAM).

Indexed structures : Binary search trees as indexes. M-way search tree: insertion, deletion. B-Trees-searching, insertion, deletion, B⁺ tree.

OMC 204A – Data Mining & Warehousing

Program	Master of Computer Applications
Semester	2
Course Title	Data Mining & Warehousing
Course Code	OMC204A
Course Credits	3
Course Type	Core Theory Course

1. Course Summary

The aim of this course is to introduce students with data mining techniques and gain hands-on experience in applying Data Mining techniques like classification, clustering, and association rules to extract valuable patterns from diverse datasets. They will also explore the significance of Data Warehousing in integrating and managing data efficiently and delve into OLAP and multi-dimensional data modeling for insightful data analysis. The course's broader perspective includes the exploration of advanced databases.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Recognize and identify the basic concepts and terminology of data mining and warehousing. [L-2].
- CO-2.** Apply data preprocessing techniques, association analysis, classification algorithms, and clustering algorithms to address problems, such as market basket analysis, customer segmentation, and fraud detection data mining problems. [L-3].
- CO-3.** Analyze and assess the accuracy and quality of data mining models by utilizing metrics such as precision, recall, and F1-score. [L-4].
- CO-4.** Develop critical thinking and problem-solving skills for specific business problems and interpret the results of data mining analyses [L-5].
- CO-5.** Describe the challenges and techniques associated with mining complex data types such as graphs, text, multimedia, and the World Wide Web. [L-2].

3. Course Contents

Sr. No	Units
1	<p>Unit 1- Introduction to Data Mining & Data Warehouse:</p> <p>Data Mining:</p> <ul style="list-style-type: none"> • Fundamentals of data mining • Data Mining Functionalities • Classification of Data Mining systems • Major issues in Data Mining • Applications <p>Data Warehouse</p> <ul style="list-style-type: none"> • Definition • Challenges • Data Warehousing Components

	<ul style="list-style-type: none"> • Difference between Database System and Data Warehouse • Data Warehouse Models: Enterprise Warehouse, Data Mart, and Virtual Warehouse
1	<p>Unit 2- Multi-dimensional data Model:</p> <ul style="list-style-type: none"> • Data Cubes • Stars • Snowflakes • Fact Constellations • Concept hierarchy • 3 Tier Architecture • Data warehouse Measures their categorization and computation. • Need of OLAP • Operations in OLAP • OLAP Server Architectures
3	<p>Unit 3: Data Preprocessing</p> <ul style="list-style-type: none"> • Need for preprocessing Descriptive data summarization. • Major Tasks in Data Preprocessing • Data Cleaning • Data Integration • Data Reduction • Data Transformation and Data Discretization • Data Mining Primitives: Task-relevant data, measures and identification of patterns, KDD
4	<p>Unit 4: Data Mining Techniques (Association Rules & Clustering)</p> <ul style="list-style-type: none"> • Frequent Itemsets • Closed Itemsets • Association rules from transaction database & relational database • Apriori algorithm and correlation analysis • Requirements for Cluster Analysis • Data types in cluster analysis • Categories of clustering techniques: Partition method, Hierarchical method and Density based methods
5	<p>Unit 5: Data Mining Techniques (Classification and predication)</p> <ul style="list-style-type: none"> • Issues related to classification & prediction. • Attribute Selection Measures • Decision tree induction • Bayesian classification • Classification methods K-nearest neighbor classifiers • Overview of Advanced Features of Data Mining • Mining complex data objects • Spatial databases • Multimedia databases • Mining Word Wide Web

OMC 204B – Python Programming

Program	Master of Computer Applications
Semester	2
Course Title	Python Programming
Course Code	OMC 204B
Course Credits	3
Course Type	Core Theory Course

1. Course Summary

This course aims at providing a good foundation of Python language's control flow, syntax, semantics, data structures and libraries. Students also acquire a good hold on basic concepts like variables, different datatypes and loops. They will also be skilled to write programs using Python constructs like strings, lists, tuples and dictionaries. They will get introduced to object-oriented programming concepts. Finally, they will learn to write simple programs using regular expressions and thus solve real-world problems.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Identify the data structures, their syntax and semantics, available in Python [L-1].
- CO-2.** Explain the concepts of conditional execution, functions and iterations [L-2].
- CO-3.** Illustrate the basic concepts of object-oriented programming in Python [L-3].
- CO-4.** Examine programs written in Python using strings, files, lists, directories and tuples [L-4].
- CO-5.** Determine the importance of using regular expressions in the programs [L-5].

3. Course Contents

Sr. No	Units
1	<p>Unit 1:</p> <p>Introduction</p> <p>The Way of the Programs, Variables, Expressions and Statements</p> <ul style="list-style-type: none">• What is a program?• Running Python• The first program• Arithmetic operators• Values and types• Formal and natural languages• Values and types• Variables• Variable names and keywords• Statements• Operators and operands• Expressions• Order of operations• Modulus operator• String operations• Asking the user for input <p>Conditional execution</p> <ul style="list-style-type: none">• Boolean expressions• Logical operators• Conditional execution• Alternative execution• Chained conditionals• Nested conditionals• Catching exceptions using try and except• Short-circuit evaluation of logical expressions

OMC 204C – Software Project Management

Program	Master of Computer Applications
Semester	2
Course Title	Software Project Management
Course Code	OMC 204C
Course Credits	3
Course Type	Discipline-Specific Elective Course

1. Course Summary

This course aims to develop an understanding of basic concepts and issues in software project management (SPM). The students are taught the components, challenges, and opportunities in SPM. The students are also taught the steps in project planning, monitoring, and control. Students are exposed to the different software process models and software measurement methods for cost, effort, and time estimation. Students will get familiar with risk management, activity planning, preparing project schedules, and the importance of software quality in project planning.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Describe the stages of the software project and the roles of management. [L-1]
- CO-2.** Discuss cost-benefit evaluation techniques for selecting project proposals. [L-2]
- CO-3.** Construct a suitable software process model and examine risks. [L-3]
- CO-4.** Determine the cost, efforts, and schedule for a software project. [L-3]
- CO-5.** Determine the software quality parameters, project, and resource schedule. [L-3]

3. Course Contents

Sr. No	Units
1	<p>Unit 1: Introduction to SPM and Project Planning</p> <ul style="list-style-type: none"> • What is a Software Project? OMC 204D- Probability and Statistics

Program	Master of Computer Applications
Semester	2
Course Title	Probability and Statistics
Course Code	OMC 204D
Course Credits	3
Course Type	Discipline-Specific Elective Course

1. Course Summary

The aim of the course is to establish a strong foundation in probability and statistics. Students are taught the concepts of mean, median, and standard deviation in the discrete and continuous probability distribution. The course lays strong emphasis on the basic concepts of inferential statistics and probabilistic reasoning. The course prepares the student to take mathematically intensive, application-oriented courses, such as machine learning and artificial intelligence.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Define and determine sample mode, mean, standard deviation, sample variance, unbiased sample variance, sample proportion, and other measures of central tendency [L-1].
- CO-2.** Discuss and apply the concepts of hypothesis testing and p -value [L-2, L-3].
- CO-3.** Apply basic probability rules, including additive and multiplicative laws, using the terms, independent and mutually exclusive events [L-3].
- CO-4.** Calculate probabilities and marginal and conditional distributions of bivariate random variables [L-3].
- CO-5.** Apply basic rules and theorems in probability including Bayes' theorem and the central limit theorem [L-3].
- CO-6.** Apply the method of least squares to estimate the parameters in a regression model [L-3].

3. Course Contents

Sr. No	Units
1	<p>Unit 1: Measures of Central Tendency and Dispersion</p> <ul style="list-style-type: none"> • Introduction to statistics: Statistical Thinking, Collecting data, Statistical Modeling Framework, measure of central tendency and variance, Importance of Data summary and Display, Tabular and Graphical display. • Introduction to Probability: Basic terminology, types of probability, Probability rules, Statistical independence, statistical dependency, Bayes' theorem.
2	<p>Unit 2: Discrete Random Variables and Probability Distribution:</p> <p>Discrete Random variables, Probability distributions and Probability mass functions, Cumulative distribution functions, Mean and Variance of a discrete random variable, discrete uniform distribution, Binominal distribution, Hyper Geometric distribution, Poisson distribution, Applications.</p>

3	Unit 3: Continuous Random Variables and Probability Distributions Continuous random variables, Probability distributions and probability density functions, cumulative distribution functions, Mean and Variance of a continuous random variable, uniform distribution, Normal distribution, Normal approximation to Binominal and Poisson distribution, Exponential distribution
4	Unit 4: Hypothesis Testing Estimation theory, Hypothesis testing, Inference on the mean of a population (variance known and unknown), Inference on the variance of a normal population, Inference on a population proportion, Testing for Goodness of Fit, Inference for a difference in Means, Variances known, Inference for a difference in means of two normal distributions, Variances unknown, Inference on the Variances of two normal populations, Inference on two population proportions.
5	Unit 5: Linear Regressions and Correlation <ul style="list-style-type: none"> • Simple Linear Regression, Properties of Least square Estimators and Estimation of variances, Transformations to a straight line, Correlation. • Multiple linear regression model, least square estimation of parameters, Matrix approach to multiple linear regression, properties of least square estimators, and estimation of variance.

OMC205A – Research Methodology

Program	Master of Computer Applications
Semester	2
Course Title	Research Methodology
Course Code	OMC205A
Course Credits	2
Course Type	Core Theory Course

1. Course Summary

This course aims to create an introduction and overview of the research methodology. The students are taught the technique of defining a research problem. The students are trained in the approaches of preparing research design and sampling techniques. This course also emphasizes different types of data measurement and scaling techniques. Different methods of data collection, preparing reports, and a final presentation in research work are taught in this course. This course is helpful to students in pursuing research in the future.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Describe the research methods and identify the steps of research for a given domain [L-1]
- CO-2.** Explain the selection of a problem definition in a research area. [L-2]
- CO-3.** Explain different research designs and characteristics of a good design. [L-2]
- CO-4.** Discuss measurement in research and scaling techniques. [L-2]
- CO-5.** Examine the collection of data and prepare reports and presentations [L-3]

3. Course Contents

OMC205B - Entrepreneurship

Program	Master of Computer Applications
Semester	2
Course Title	Entrepreneurship
Course Code	OMC205B
Course Credit	2
Course Type	Core Theory Course

1. Course Summary

This entrepreneurship course provides a comprehensive introduction to the concept of entrepreneurship, exploring its significance, evolution, types, characteristics, and the development of entrepreneurial competencies. It further delves into key theories related to entrepreneurship, such as McClelland's Need Achievement Theory and Schumpeter's Theory of Creative Destruction. The course distinguishes between entrepreneurs, intrapreneurs, and managers, and addresses specific categories of entrepreneurship like social and rural entrepreneurship. It analyzes the growth and promotion of entrepreneurship in India, the influence of socio-cultural, economic, and political environments, and the role of creativity and innovation. The course also highlights the support provided by various institutions, the role of government schemes, and the significance of incubation centers. Finally, it outlines the road map for enterprise finance and promotion, covering sources of funding, planning, market analysis, and business plan development.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO1:** Comprehend the fundamental concepts of entrepreneurship and distinguish among its various types.
- CO2:** Demonstrate the roles and significance of entrepreneurs, intrapreneurs, and managers.
- CO3:** Apply entrepreneurial theories to develop competencies and manage new ventures.
- CO4:** Analyze the socio-cultural, economic, and political influences on entrepreneurship in India.
- CO5:** Evaluate the government schemes, institutional support systems, business plans, and funding sources in entrepreneurial contexts.

3. Course Contents

Sr. No	Units	Unit Outcomes
1	<p>Unit 1- Introduction to Entrepreneurship:</p> <ul style="list-style-type: none"> • Meaning , Definition of Entrepreneurship • Role and Expectations • Entrepreneurial style sand types • Entrepreneurship Development & Evolution • Characteristics of an entrepreneur • Entrepreneurial Competencies • Intrapreneurship 	<p>After the successful completion of the unit, the learner should be able to:</p> <ol style="list-style-type: none"> 1. Comprehend the fundamental concepts of entrepreneurship 2. Explain the various types of entrepreneurship 3. Describe the various characteristics of entrepreneurs 4. Describe the concept of the intrapreneur 5. Comprehend the different concepts of entrepreneurship

	<ul style="list-style-type: none"> • Entrepreneur V/s Intrapreneur • Women Entrepreneurs • Social Entrepreneurship • Rural Entrepreneurship • Family Business Entrepreneurship • Factors affecting Entrepreneurship 	
2	<p>Unit 2 – Theories of Entrepreneurship:</p> <ul style="list-style-type: none"> • Theories of Entrepreneurship • Motivation theories • McClelland's Need Achievement Theory • BRIE Model • Timmons model of entrepreneurial process • Schumpeter's Theory of Creative Destruction 	<ol style="list-style-type: none"> 1. Describe the various theories of entrepreneurship 2. Explain the various factor of McClelland's theory of entrepreneurship
3	<p>Unit 3: Growth and Promotion of Entrepreneurship:</p> <ul style="list-style-type: none"> • Promotion of entrepreneurship • Role of socio-cultural, economic and political environment • Growth of entrepreneurship in India • Constraints for the promotion of entrepreneurial culture • Role of Creativity and innovation 	<ol style="list-style-type: none"> 1. Describe the role of various factors that influence entrepreneurship 2. Explain the growth the entrepreneurship in India 3. Discuss the role of Creativity and innovation in Entrepreneurship
4	<p>Unit- 4 Institutions for Supporting Entrepreneurship</p> <ul style="list-style-type: none"> • Role of Government in promoting Entrepreneurship • MSME policy in India, Startup India • Make in India schemes • District Industries Centers (DIC) • Small Industries Service Institute (SISI), Entrepreneurship Development Institute of India (EDII) • National Institute of Entrepreneurship & Small Business Development (NIESBUD) • Role of various Government schemes - PMEGP, CGTMSE, PMKVY, Mudra loan Incubation, Role of Incubation Centers • Role of Commercial Banks 	<ol style="list-style-type: none"> 1. Understand the different schemes and program of government that supports entrepreneurs 2. Explain the role of make in India Scheme 3. Describe the role of incubation centers and commercial banks
5	<p>Unit-5: Road map for Enterprise Finance and Promotion</p> <ul style="list-style-type: none"> • Long term and Short term financial support, Sources of Financial support • Development Financial Institutions, • Investment Institution • Planning/Budgeting, 	<ol style="list-style-type: none"> 1. Describe the role of various financing institution in entrepreneurship development 2. Explain the concepts such as Crowd funding venture capital etc. 3. Prepare the Business plan by analyzing industry and market

	<ul style="list-style-type: none"> • Sources of funding, • Informal capital– Friends & Family, MPDA, SFURTI. • Crowd funding, Venture capital, Private Equity, Financing Mix • The Pitch, Preparing for your investor presentation, Role of Commercial Banks Creating Entrepreneurial Venture, Business Planning Process, • Elements of Business Plan • Market Analysis • Industry Analysis

Graphic Era (Deemed to be) University

MCA

2nd Semester

OMC 206 Career Skills

Learning Outcomes:

LO 1. Apply the properties of numbers and the other concepts to solve different problems on number theory.

LO 2. Understand the concepts of profit loss and simple interest and compound interest to solve different types of problems.

LO 3. Apply the concepts of Ratio and Proportion to solve the different types of questions in mixtures and solutions.

LO 4. Analyze the relation between speed, distance and time to effectively solve the problems of relative speed, boats and streams and trains.

LO 5. Understand the concept of Permutation, Combination and Probability to apply and practice the different types of questions.

Course Contents:

UNIT 1:

7 Hours

Classification of numbers, rules of divisibility, properties of remainders, LCM-HCF and their applications, concept of the last digit, concept of alpha numerals. Practice of questions based on number system concepts.

Concept of percentage and percentage equivalent of fractions, multiplication factor, importance and understanding of the base in calculations, concept and application of the successive percentage change rule.

UNIT 2:

6 Hours

Concept of profit, loss and discount and its application. Understanding and practice of questions based on addition of impurity and unequal quantity buying and selling concept.

Concept and understanding of simple and compound interest and their difference, understanding CI as an application of the successive percentage change rule, concept of effective rate of interest and practice of all the types of problems in SI and CI.

UNIT 3:**5 Hours**

Concept of ratio proportion and its application. Concept, understanding and practice of mixtures and solutions including alligation and replacement of part of a solution.

Concept and understanding of average, weighted average and its application. Practice of problem based on age related concepts.

UNIT 4:**6 Hours**

Concepts of time, speed and distance, understanding the direct and inverse relations in the topic, average speed and its application. Understanding the concept and application of relative speed and practice of problems based on trains and boats and streams.

Concepts of time and work and its application based problems using the LCM method for individual efficiencies and practice of problems based on group efficiencies.

UNIT 5:**6 Hours**

Concept, understanding and practice of questions based on permutation and combination, difference in the approach for different things and identical things.

Concept, understanding and practice of questions based on probability.

2.P.A.Anand, Quantitative Aptitude for Competitive Exams, Wiley Publication, First Edition, 2015.

OMC208 - Advanced Database Management Systems Laboratory

Program	Master of Computer Applications
Semester	2
Course Title	Advanced Database Management Systems
Course Code	OMC208
Course Credits	2
Course Type	Core Practical Course

1. Course Summary

Database management system is one of the core courses in the context of computer science and information technology. The goal of this course is to lay a strong foundation for the database and database management systems among learners. This course has been started by explaining the fundamental terms and different data models used in databases for a better understanding of the learners. The learners are taught database architecture, database schema, instances and the concept of data independence. The learners are also taught how to express real world problems with the help of entity relationship model and relational model. Entity relationship diagrams are demonstrated with the help of case studies. In the subsequent lessons, concepts of keys, relational algebra constraints, operations and queries have been discussed and explained to the learners. In this course, the concept of SQL has been discussed in depth. Basic as well as advanced SQL queries are explained with the help of suitable examples and case studies. In this course, various concepts related to database design, such as functional dependencies, normal forms, multivalued dependencies, and decomposition techniques have been explained to the learners. This course also emphasizes different types of data storage techniques in the context of databases.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Understand the concepts of database management and can differentiate the database approach with the file system approach [L-2].
- CO-2.** Sketch and develop Entity Relationship Diagrams for real world problems and design databases [L-4].
- CO-3.** Apply and analyze Relational database queries with the help of Structured Query Language (SQL) and construct simple and moderately advanced database queries in SQL [L-6].
- CO-4.** Evaluate and Apply logical database design principles, including keys, constraints and database normalization and design normalized databases [L-6].
- CO-5.** Understand and defend the importance of concurrency control in Transaction Processing Systems [L-5]

3. Course Contents

Sr. No	Units
1	Unit 1: Introduction <ul style="list-style-type: none">• Basic Terminology• Codd Rules• DBMS Vs. RDBMS• Introduction to SQL• SQL Languages• Data Types
2	Unit 2: List of Experiments
i	Basic SQL queries Based on: <ul style="list-style-type: none">• CREATE TABLE• INSERT INTO• SELECT• UPDATE• DELETE
ii	Queries Based on Schema: <ul style="list-style-type: none">• ALTER TABLE• DROP and TRUNCATE
iii	Queries based on Adding and Removing Constraints CHECK Constraint
iv	Queries to Implement FOREIGN KEYS
v	UNION, INTERSECTION, MINUS and CARTESIAN JOIN
vi	Views & Queries in SQL, Specifying Constraints & Indexes in SQL
vii	PL/SQL: Architecture of PL/SQL, Basic Elements of PL/SQL, PL/SQL Transactions
viii	Cursors, Triggers and stored procedures

OMC209– Advanced Java Programming Laboratory

Program	Master of Computer Applications
Semester	2
Course Title	Advanced Java Programming Laboratory
Course Code	OMC209
Course Credits	2
Course Type	Laboratory

1. Course Summary

The aim of this course is to gain the skills, hands-on experience and practical knowledge necessary to build simple applications using Advanced Java Programming. The students learn the concepts of classes and objects, string handling, exception handling, inheritance, packages and interfaces, and their implementation in Java. Students make use of I/O streams in Java. The students also learn the concepts of creating and using servlets and handling client requests and server responses. Students learn to use GET and POST methods for passing form data to Servlets. This course also emphasizes on the advantages of cookies and sessions. Students are trained to develop server-side code using Servlets and Java Server Pages. Students learn to apply the concepts of exception handling for developing efficient JAVA applications to handle run-time errors. They learn the basics of Java Beans and Java database connectivity(JDBC).Students learn the techniques of debugging and testing Java Programs.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Apply the concepts of object-oriented programming, method overloading, string handling, and reusable code by the use of inheritance, interfaces, and polymorphism to write simple Java programs[L-3]
- CO-2.** Demonstrate the use of Servlets and JSP in developing server-side code.[L-3]
- CO-3.** Demonstrate the use of Java Beans in JSP pages.[L-3]
- CO-4.** Apply the concepts of exception handling for developing efficient JAVA applications to handle run-time errors.[L-3]
- CO-5.** Develop applications using GET and POST methods for passing data to Servlets.[L-6]

3. Course Contents

Advanced Java Programming Laboratory - Program List

1. Create a Java class “Employee” with the attributes - employee number, name, designation and salary.
 - a) Implement methods to set and display these attributes

- b) Implement parameterized constructors for initializing these attributes. Use “this” keyword to illustrate the difference between instance variable and constructor parameters. Display these attributes.
2. Write a Java program to demonstrate method overloading and constructor overloading.
3. Write a Java program to perform the following operations on a string.
 - a) Count the number of characters and digits.
 - b) Check whether the given string is palindrome or not.
4. Write a Java program to demonstrate single and multi-level inheritance. Display the order of execution of constructors in multi-level inheritance.
5. Write a Java program to demonstrate method overriding.
6. Write a Java program to illustrate the use of
 - a) Abstract class
 - b) Interfaces in Java
7. Write a Java program to demonstrate exception handling. Show the order of execution of “try”, “catch” and “finally” blocks when an exception occurs and when it does not occur during the execution by providing appropriate inputs during execution and displaying messages.
8. Write a Java program to illustrate the use of I/O streams.
9. Write a Java Servlet program to implement a dynamic HTML using Servlet(Student name and enrolment number should be accepted using HTML and displayed using a Servlet).
10. Write a Java Servlet program to demonstrate the use of cookies.
11. Write a Java Servlet program to demonstrate the use of GET and POST methods for handling HTTP client requests and server responses.
12. Write a JSP program to demonstrate the use of Java Beans.

4. Course Articulation Matrix (CO-PO-PSO Map)

	Programme Outcomes (POs)												Programme Specific Outcomes (PSOs)			
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2	PSO-3	PSO-4
CO-1	3	2	3					2	1	1	2		3	3	2	2

OMC210- Advanced Data Structures Laboratory

Program	Master of Computer Applications
Semester	2
Course Title	Advanced Data Structures Laboratory
Course Code	OMC210
Course Credits	2
Course Type	Core Practical Course

1. Course Summary

Advanced data structures are introduced with the aim of implementing current age real life problems in an efficient way in the context of computers. The goal of this course is to lay a strong foundation for the elementary data structures as well as advanced data structures among learners. This course has been started by explaining the basic review of data structures and algorithms for a better understanding of the learners. The learners are taught advanced sorting techniques and non-linear data structures including Trees and Graphs. In this course, various concepts related to advanced hashing and searching techniques including hash table, hash functions, binary search trees, RB trees and AVL trees have been explained to the learners. This course also emphasizes different types of advanced data structures like B Trees, Binomial Heaps and Fibonacci Heaps.

2. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- CO-1.** Define and Express real world problems using Advanced Data Structures [L-1]
- CO-2.** Compare and analyze the merits and demerits of various data structures in terms of complexity [L-4].
- CO-3.** Design algorithms and develop programs using a variety of advanced data structures such as B-Trees, RB Trees, Binomial Heaps and Fibonacci Heaps [L-6].
- CO-4.** Implement and evaluate operations like searching, insertion, deletion, traversing, and similar on various advanced data structures [L-5].
- CO-5.** Understand, analyze and implement the concept of Graphs and Trees in real life problems [L-6].

3. Course Contents

Sr. No	Units
1	Unit 1: Introduction <ul style="list-style-type: none">• Basic Terminology• Pointer and dynamic memory allocation• Elementary Data Organization• Algorithm Complexity and Time-Space trade-offs
2	Unit 2: List of Experiments
i	Write a C program to demonstrate the Array operations.

ii	Write a C program to demonstrate the stack operations. Use array to represent the stack.
iii	Write a C program to demonstrate the stack operations. Use array to represent the stack.
iv	Write C programs to demonstrate the following data structures using arrays. <ul style="list-style-type: none"> • Queue • Circular queue
v	Write C programs to demonstrate the following operations on a linked list: <ul style="list-style-type: none"> • Creation of a list • Adding an element at the beginning of the list. • Adding an element at the end of the list. • Deleting the first element. • Deleting the last element.
vi	Write C programs to demonstrate: <ul style="list-style-type: none"> • Heapsort. • Quicksort, • Mergesort, • Counting sort, • Radix Sort, • Bucket Sort
vii	Write C program to implement the following <ul style="list-style-type: none"> • Linear search • Binary search
viii	Write C program to perform the following operations on a graph. <ul style="list-style-type: none"> • Depth First Search • Breadth First Search
ix	Write C program to implement the following: <ul style="list-style-type: none"> • Kruskal's Algorithm, • Prim's Algorithm, • Bellman-Ford algorithm
x	Write C program to implement the following: <ul style="list-style-type: none"> • B-Tree • RB Tree
